

# Pathways for conversion to energy

Michael Jack, Senior Scientist, 9<sup>th</sup> February 2010

# Biomass for heat, power and transport fuels

# Pathways analysis

## Criteria:

- Size of resource (regional vs. national)
- Environmental sustainability of pathway
- Economic viability
- Technological maturity

## Pathway Analysis:

- 1 summary report
- 8 contributing reports

# Residual resources and regional demand

Includes all major biomass residuals: from forestry, agriculture, municipal, meat and dairy industry

# National energy demand

	<b>Demand (consumer)</b>	<b>Fossil fuels</b>	<b>Biomass residuals (potential)</b>
Liquid Fuels	245 PJ/y	100%	6%
Electricity	135 PJ/y	27%	12%
Heat	140 PJ/y	41%	30%

 Purpose-grown biomass

# Purpose grown forest and national demand

## Legend

- Region boundary
- Existing plantations
- Land suitable for biofuel
- Coastline

# Life-cycle assessment of bioenergy pathways

- Life-cycle assessments of 16 pathways
- Identify environmental and economic “hotspots”
- Results sensitive to system boundary and allocation method

# LCA – Woody residues to consumer energy

- Potentially 26 PJ p.a. of primary energy, rising to 46 PJ p.a. by 2030.

	<b>Combustion Heat</b>	<b>Combustion CHP</b>	<b>Ethanol</b>	<b>Gasification Heat</b>	<b>Gasification CHP</b>	<b>Gasification Biodiesel</b>
<b>EROE I</b>	<b>7.5:1</b>	<b>4.9:1</b>	<b>3.5:1</b>	<b>5.6:1</b>	<b>4.0:1</b>	<b>3.9:1</b>
<b>GHG reductions*</b>	<b>92%</b>	<b>94%</b>	<b>75%</b>	<b>90%</b>	<b>83%</b>	<b>83%</b>
<b>Cost (\$/GJ)</b>	<b>\$15.60</b>	<b>\$27.60</b>	<b>\$59.40</b>	<b>\$31.20</b>	<b>\$42.00</b>	<b>\$34.50</b>
<b>Technology status</b>	<b>Mature</b>	<b>Mature</b>	<b>Developing</b>	<b>Developing</b>	<b>Developing</b>	<b>Developing</b>

\* compared to heat from coal, electricity from the grid and fossil transport fuels

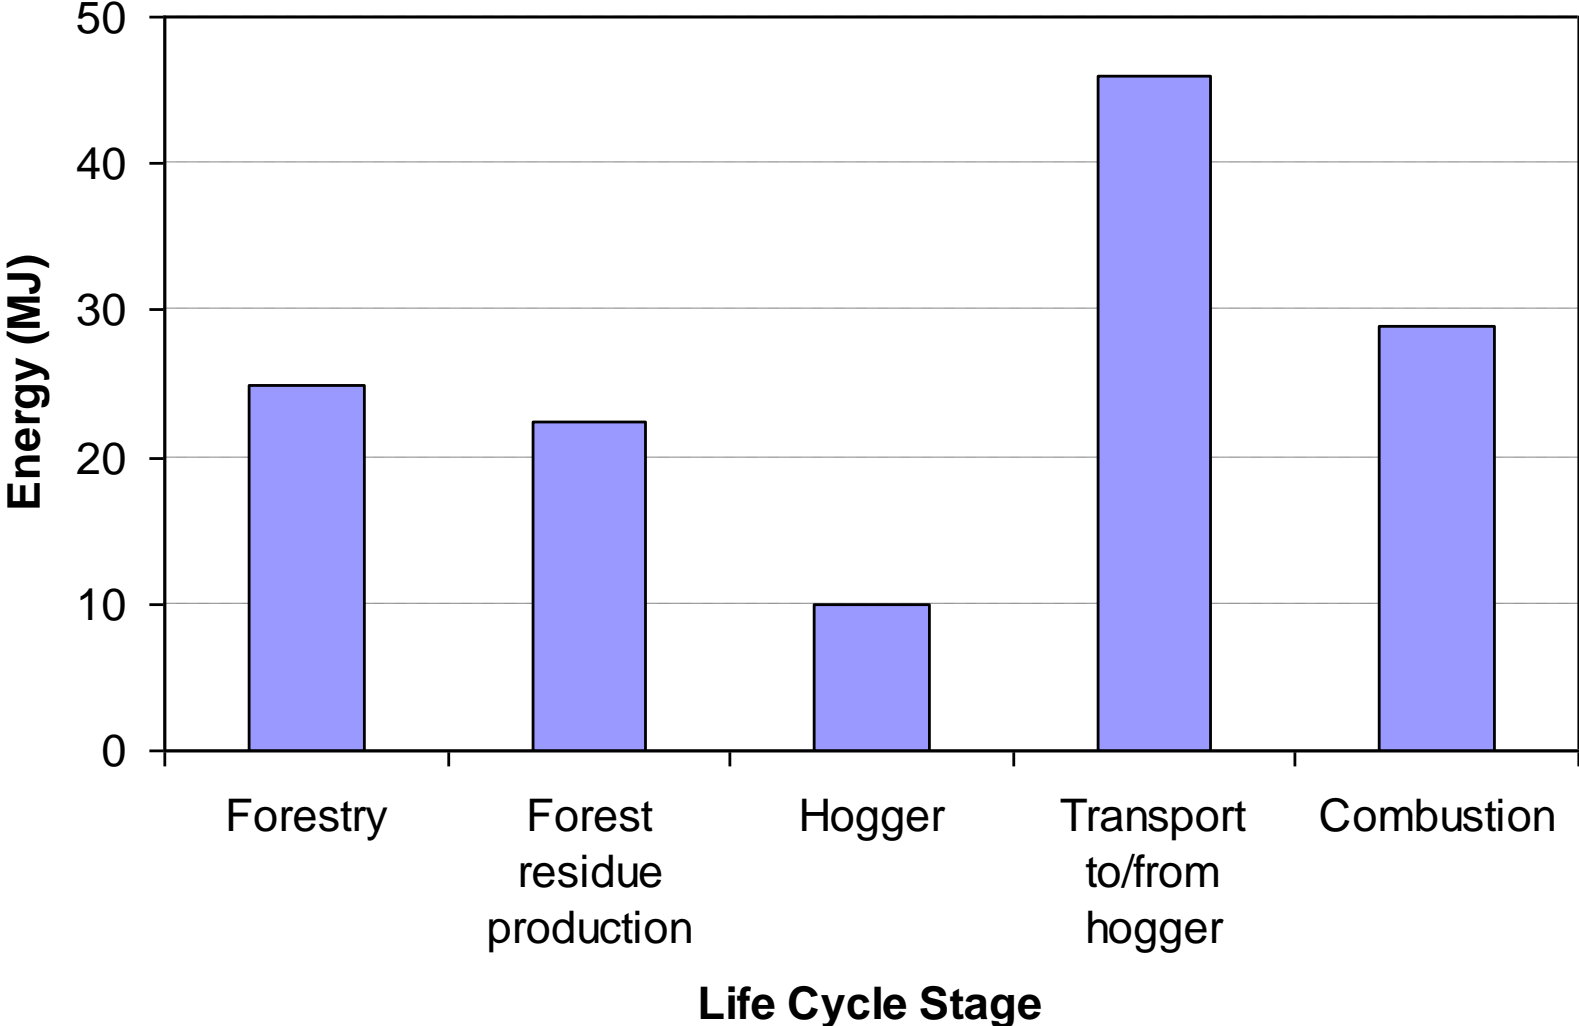

# LCA - Purpose-grown forest to consumer energy

- Potential scale: up to 3.372 million ha of forest producing up to 600 PJ pa of primary energy.

	<b>Combustion Heat</b>	<b>Combustion CHP</b>	<b>Ethanol</b>	<b>Gasification Heat</b>	<b>CHP</b>	<b>Gasification Biodiesel</b>
<b>EROEI</b>	<b>10.9:1</b>	<b>6.9:1</b>	<b>4.5:1</b>	<b>7.7:1</b>	<b>5.5:1</b>	<b>5.4:1</b>
<b>GHG reductions*</b>	<b>95%</b>	<b>91%</b>	<b>80%</b>	<b>93%</b>	<b>89%</b>	<b>89%</b>
<b>Cost (\$/GJ)</b>	<b>\$34.50</b>	<b>\$54.80</b>	<b>\$86.60</b>	<b>\$53.20</b>	<b>\$72.60</b>	<b>\$65.40</b>
<b>Technology status</b>	<b>Mature</b>	<b>Mature</b>	<b>Developing</b>	<b>Developing</b>	<b>Developing</b>	<b>Developing</b>

\* compared to heat from coal, electricity from the grid and fossil transport fuels

# Combustion of forest residue: Hotspots

# Economics of liquid fuels from woody biomass

- Ethanol from purpose-grown forests competitive with petrol when ~\$3/litre at the pump (US\$165 to \$210 a barrel depending on the exchange rate and carbon price).
- Given current trends likely to occur before 2020
- Carbon taxes: small effect
- Plenty of room for improvement in:
  - forest yield and harvesting and transport efficiency
  - conversion technology (intense international research)
  - cost reductions through co-products

## % reduction in CO<sub>2</sub>e, versus petrol or diesel equivalent (=0)

# Summary: Qualitative comparison of pathways

Energy Pathway	Potential Scale <sup>1</sup>	Environmental Sustainability <sup>2</sup>	Economic Viability <sup>3</sup>	Technological Maturity <sup>4</sup>
Forest residues to heat	✓ ✓	✓ ✓ ✓	✓ ✓	✓ ✓ ✓
Forest residues to ethanol	✓	✓ ✓	✓	✓ ✓
Purpose grown forest to ethanol	✓ ✓ ✓	✓ ✓	✗	✓ ✓
Pond algae on effluent to biodiesel	✓	✓	✗	✓
Purpose grown algae to biodiesel	✓ ✓ ✓	?	✗ ✗ ✗	✓
Straw to combined heat and power (CHP)	✓ ✓	✓ ✓ ✓	✗	✓ ✓ ✓
Canola crops to Biodiesel	✓ ✓	✓	✓	✓ ✓ ✓
Industrial effluent to CHP via anaerobic digestion	✓	✓ ✓ ✓ ✓	✓	✓ ✓ ✓

1. One tick: small scale, two ticks: regional scale, three ticks: national scale resource.
2. Based on greenhouse gas emissions and energy return on energy invested.
3. Ticks represent economically viable, crosses not viable at present.
4. One tick: proven at lab-scale, two ticks: demonstration, three ticks: commercial.
