

Register of Wood Energy Advisors

Find registered advisors

Registered advisors are listed as follows:

Registered advisor	Endorsement	Areas of expertise
Brook Brewerton Azwood Energy	Fuel and fuel handling.	Wood fuel supply.
Brett Eades DETA Consulting		

Registered advisor applications being processed are listed as follows:

Rob Mallinson Living Energy	Commercial feasibility and contracts	Heat plant scoping and supply.
Christian Jirkowsky Polytechnik Biomass Energy	Heat plant engineering and operation.	Heat plant scoping and supply.

What is the Registered Wood Energy Advisor Scheme?

The Registered Wood Energy Advisor Scheme, which is administered by the Bioenergy Association, provides a cost-effective means of identifying those consultants and other practitioners who have the appropriate skills and experience to advise on the investigation and development of wood fuelled systems. The aim is to achieve well scoped and engineered heat plants that meet the requirements of owners and operators to increase the number installed and operational because of high customer satisfaction and positive feedback. Quality and performance are the key factors in successful operation and will provide the necessary assurance to potential customers that wood energy systems perform with limited business risk.

The scheme is aimed at identifying advisers who are knowledgeable, experienced and independent of equipment suppliers. The scheme is administered by an independent body, to assess and approve adviser's capabilities. The registration relates to the competence of the individual advisers and not about the company which they may engage.

Advisers may have areas of specialisation for which they have specific knowledge and experience and only for which registration will apply. The areas of specialisation are recognized by endorsements to the registration. These are:

- *fuel and fuel handling* - includes biomass sourcing and fuel preparation; supply contracts
- *heat plant engineering and operation* - includes design of primary and ancillary equipment; tender, construction and commissioning

- *commercial feasibility and contracts* - includes commercial analysis; business case preparation; market analysis and development
- *engineering and commercial* - includes all aspects

Registered advisers who have an endorsement must indicate to customers and in promotional material the areas of endorsement. Registered Advisers with endorsement must not promote or infer that they have full registration covering all areas of specialization.

Information on the [Registered Wood Energy Advisers Scheme](#) is available on the website.

Registration logo

Look for the logo of the Registered Wood Energy Advisers. This signals that they meet standards acceptable to the Association.

Making a complaint

In the unlikely event that issues arise about the work of a Registered Wood Energy Advisor then the Scheme Administrator should be advised. The Administrator may be able to offer advice to help resolve the problem or a formal complaint can be received.

Details of the Bioenergy Association's [Professional Standards and Complaints Policies and Procedures](#) are available on the website
