New Zealand's Biofuel Leader

Gull is New Zealand's original biofuel retailer, introducing a greener way of driving to Kiwi motorists in 2007.

Our biofuel* is produced from renewable and sustainable sources - not extracted from the ground like other fossil fuels.

Gull retails two types of biofuel. Bioethanol blended with premium petrol for petrol vehicles. We call these blends the Gull Force range.

Biodiesel blended with mineral diesel for diesel vehicles, which is sold at selected stations as Diesel Max.

Our tankers collect ethanol as part of a return trip route, adding no extra carbon footprint to this production process.

Why use Biofuel?

Force 10 is 10% bioethanol. That's 10% of your fuel that doesn't need to be imported or pumped out of the ground. This takes pressure off our overall carbon footprint and helps keep our country clean and green.

Ethanol blended petrol is commonly used worldwide. New cars today are designed to enjoy a healthy amount of ethanol in their diet and actually get a good kick out of it.

Serious Savings

Gull has sold over 300 million litres of biofuel blends. This has delivered the equivalent of an emission reduction of 67,000 tonnes of carbon**. That's enough mineral fuel savings to drive around the earth 7,500 times!

* Gull Regular 91 is not a biofuel and contains no ethanol. Learn about our fuels visit Gull.nz/fuel
